Console

Open Console

Console runs directly in your browser, hosted on GitHub Pages. No download or installation is required.

Open Console

Use a browser that supports Web Serial, such as Chrome or Edge, to connect your device.

The code is free and available on GitHub.

Connect Serial

1. Open Serial → Connect Port
2. Choose the device/port.
3. When connected, the red dot becomes green.

Incoming text/numbers are displayed live (Numbers modes / Words mode).

Audio input (microphone)

Some modes use the microphone as a live source:

- Scope: oscilloscope / frequency bars.
- Hydra: audio-reactive background patterns.

Your browser may ask for microphone permission when enabling these features.

Keyboard shortcuts

- Space: hide/show the top menu bar
- D: toggle developer mode (shows extra menus)
