Polaxis Talko counter for Ginko Synthese Grains

This code is designed for Grains V2.

Use it to spice up your loop by using a trigger signal to count out loud.

Each time it receives a trigger signal it will say the number increased by one. If you want to reset the counter, just play with the first knob or apply a signal to that entry.

The Grains entries are assigned like :

Pot1 & CV in1 : Reset the counter
Pot2 & CV in2 : Change the Pitch
Pot3 & CV in3 : Change the Speed

CV in3 : Trigger the speech

Have fun !
