Nexus Vox

Nexus translates plain English text or phonemes into speech in real time with complete dynamic control of the voice characteristics.

Voice control parameters, such as speed, volume, tone, pitch, and expression, can be controlled via CV or embedded within the text for on-the-fly voice control.

SpeakJet vox

SpeakJet uses allophones that can be chained to produce words, but it continuously calculates how to **best transition** them for a realistic speech.

Four special prosodic codes (\SLOW \FAST \STRESS \SOFT) allow the user to fine-tune the expression of the next allophone :

alphabet: \AY \LO \FAST \FF \FAST \AX \STRESS \SOFT \BE \EY \SLOW \TT

Further tuning with the Rate, Pitch, Bend, and Volume parameters adds to the quality of the speech. These parameters are fully accessible via CV control. SpeakJet can also produce 43 sound effects, and 12 DTMF Touch Tones to create authentic glitches and beep sequences.

Sino Vox

It generates speech from Chinese Pinyin or plain English (with a charming accent).

Users can set the speed, pitch, and volume of one of the five different unique voices.

It is straightforward to operate, and the voices have great potentials.
